OTPme - Fehler #77

Improve multiprocessing shared object usage in OTPme backend.

05 February 2017 14:23 - The 2nd

Target version:				

Description

- Currently we use more shared objects (list(), dict() etc.) than we should because of a bug in python multiprocessing module   * https://bugs.python.org/issue6766
- As soon as we can use a shared DOD (dict of dicts) we can reduce the amount of shared objects used in backend (e.g. merge sync list checksum cache with the global checksum cache)   * https://bugs.python.org/msg98548
